

ZOHO questions

Phase I:

1. Given a sorted array find the position to insert the value

arr = [1, 3, 4, 5, 6, 8], x=2

Output: 1,3

arr = [2,4,6,8,10], x=6

Output: 6 is already present

arr = [-1, 0, 1, 4], x=11

Output: 10, NULL

2. Print the following pattern:

```
      1
     6 2
    10 7 3
   13 11 8 4
  15 14 12 9 5
```

3.

Question : Write a program to Get an integer as input as display an output as shown below.

Eg: **Input:** 3

Output: 0

```
      303
     23032
    1230321
```

Input: 5

Output: 0

```
      505
     45054
    3450543
   234505432
  12345054321
```

4.

Question : Write a program to Generate a random 10 digit no? (No digits should repeat).

- a. First digit should be divisible by 1
- b. First 2 digits should be divisible by 2
- c. First 3 digits should be divisible by 3
- d. First 10 digits should be divisible by 10.

5.

Print the square diamond pattern (Diamond spaces should be in centre)

Eg: N=7
